Summary

Learn React

- Transferable knowledge

Create React components

- Header component
- Footer component
- Title component
- And more

Understanding Components in Gatsby

3 Types of React Components

Page components

Layout components

Regular components

3 Types of React Components

Page components

React components with a .js file extension under /src/pages.

Layout components

Regular components

3 Types of React Components

Page components

React components with a .js file extension under /src/pages.

Represents complete page, with UI and logic.

Layout components

Regular components

3 Types of React Components

Page components

React components with a .js file extension under /src/pages.

Represents complete page, with UI and logic.

Layout components

Also a React component.

Regular components

3 Types of React Components

Page components

React components with a .js file extension under /src/pages.

Represents complete page, with UI and logic.

Layout components

Also a React component.
Represents the look of the page.

Regular components

3 Types of React Components

Page components

React components with a .js file extension under /src/pages.

Represents complete page, with UI and logic.

Layout components

Also a React component.

Represents the look of the page.

Reused throughout the site.

Regular components

3 Types of React Components

Page components

React components with a .js file extension under /src/pages.

Represents complete page, with UI and logic.

Layout components

Also a React component.
Represents the look of the page.

Reused throughout the site.

Regular components

A React component too.

3 Types of React Components

Page components

React components with a .js file extension under /src/pages.

Represents complete page, with UI and logic.

Layout components

Also a React component.
Represents the look of the page.

Reused throughout the site.

Regular components

A React component too.
Building blocks of all we do in Gatsby.

3 Types of React Components

Page components

React components with a .js file extension under /src/pages.

Represents complete page, with UI and logic.

Layout components

Also a React component.
Represents the look of the page.

Reused throughout the site.

Regular components

A React component too.
Building blocks of all we do in Gatsby.

If needs to be reused, build it as a component.

Page components

React components with a .js file extension under /src/pages.

Represents complete page, with UI and logic.

Layout components

Also a React component.

Represents the look of the page.

Reused throughout the site.

Regular components

A React component too.

Building blocks of all we do in Gatsby.

If needs to be reused, build it as a component.

Bundle components together to create larger components.

3 Types of React Components

Page components

Layout components

Regular components

They serve different purposes,
but are all the same.

React components!

Creating a Title component

Summary

React components

- Reusability
- Extendibility
- Modularity
- Props object
 - Contains all component properties
 - Special property called {children}

SASS

- global variables
- @import
